Hardware & Software Engineer

Are you eager to work on the development and production of innovative and sustainable power and communication electronics? We are looking for a part-time hardware engineer that has affinity with software or a software engineer that has experience with hardware. FlexSol Solutions is a young, dynamic and high-tech company based on the TU Delft campus with unique solar technology. We make beautiful and innovative products like autonomous outdoor lighting and solar roof tiles. Are you interested in joining our team? Let us know!

Job description
You will be primarily focusing on schematics, PCB layouts, PCB testing and programming microcontrollers. You will work together with several other electrical- and product engineers on various projects and will mainly be dealing with the following elements:

- Power electronics (e.g. DC/DC converters).
- Maximum power point tracking algorithms and controllers
- Battery management systems
- (Wireless) communication: RS485, GSM, Bluetooth, M2M, GPS, Z-wave, etc.

Your profile
You have experience in hardware design or software design - preferably both. You have a passion for engineering and are only satisfied with the best results. You are independent in your work and like to take initiative. You enjoy an informal work atmosphere and flexibility.

Your profile:
- Experience with programming MCU's.
- Experience with C/C++
- Experience with PCB Design
- Preferably housed in the region
